To really nail the Science section of the ACT standardized exam, you have to understand basic principles of science - experimentation, data collection, numerical and graphic data analysis, and how to develop conceptual conclusions. Who better to write the test prep book than an engineer who loves science? Michael Cerro uses his background as a chemical engineer, chess player, and highly-impactful ACT tutor with years of test prep experience to write a book that offers a new approach to ACT Test Prep rooted in: LOGIC. He brings together copious opportunities to practice with sample problems at each strategic lesson, using customized questions that feel just like the real test. Michael has an ability to create essential teaching moments on each page, as you walk through the book; and you may even have fun doing it! Above all, his love of the exam and of science ensure that anyone who uses this book - from teachers to tutors to students - will master the ACT Science section as well as gain a valuable understanding about the world of science that will be beneficial throughout life.

Genres across the Disciplines presents cutting edge, corpus-based research into student writing in higher education. Genres across the Disciplines is essential reading for those involved in syllabus and materials design for the development of writing in higher education, as well

as for those investigating EAP. The book explores creativity and the use of metaphor as students work towards becoming experts in the genres of their discipline. Grounded in the British Academic Written English (BAWE) corpus, the text is rich with authentic examples of assignment tasks, macrostructures, concordances and keywords. Also available separately as a paperback.

Gold Plus is the updated edition of Gold, the trusted exam preparation course for adult and young adult learners. FCE Gold Plus corresponds to level B2 of the Common European Framework.

While oriented strandboard (OSB) is increasingly accepted as a structural building product, its application in stressed skin panels (SSP) is limited because of a lack of engineering data for short- and long-term flexural behaviour. In 1986/87, 24 SSPs were constructed, six with flanges of Douglas-fir plywood, six with flanges of Canadian softwood plywood (CSP), and 12 with flanges of OSB. Half were tested for short-term (elastic) behaviour and the other half for long-term (creep) behaviour. Long-term creep testing was begun in February 1987 and continued through to 1989/90. This report presents the results of the 1989/90 testing, which continued measuring and recording test data for deflection, relative humidity, and temperature on the three types of panels; established model predictions for each type of load duration set up for each type of SSP; compared prediction and experimental results using accepted analytical methods and indicated whether the models can be used for accurate prediction of time dependent properties of the different SSPs; determined the value of model parameters that can be related to mechanical properties of SSPs and compared those results to those of other jurisdictions; and indicated the practical significance of the results for house performance.

Published to high praise--"groundbreaking . . . a landmark" (Poets and Writers)--this was the first anthology to celebrate the diversity of women who write.

This volume of specially commissioned articles examines theory and practice in EAP.
