to facilitate student's understanding of the DSM IV and other texts related to the diagnoses of mental disorders. It is designed to enhance the student's ability to assess clients' strengths and to diagnose any emotional difficulties the client may be experiencing. It will provide students with the opportunity to practice their assessment skills in a classroom environment prior to entering the field as a mental health professional. Students will not only learn the various diagnostic categories of the DSM IV but also how to apply these categories to clients they will be seeing in practice. It will aid students in understanding dual diagnoses, symptom formulation, and the

role of the right ventricle in PE pathophysiology. Efficient algorithms for diagnosis and exclusion of DVT and PE are emphasized. An state-of-the-art review of current techniques for the management of high risk VTE, including submassive and massive PE, is presented. The novel oral anticoagulants are revolutionizing the way VTE is treated and are covered in detail.

This study guide actively involves students in the text material, using a variety of engaging exercises and self-tests. The workbook helps students organize their studies, take better notes, identify areas for improvement, and be better prepared for examinations.
