Pacing and ICDs are used increasingly in the management of arrhythmias and a number of different cardiac conditions. Specialists, general cardiologists and general physicians are now closely involved in managing patients with these devices. **Implantable Cardiac Pacemakers and Defibrillators:** All you wanted to know is written by leading specialists from the UK and USA and is designed for all physicians looking for a clear and comprehensive introduction to the principles and functions of these devices. The focus of this book has been on the indications for these devices and continuing patient management for the generalist and those in training - including complications and troubleshooting that arise peri- and post-implantation. Not only does **Implantable Cardiac Pacemakers and Defibrillators** provide a sound introduction to the subject, in the later chapters it goes beyond the basics, introducing more advanced techniques such as lead extraction. It can be used both for those in training and for those with direct patient care responsibilities. With its up to date, evidence-based approach and inclusion of the latest AHA guidelines on pacing, this is an ideal guide to a major aspect of modern cardiac management.

A practical and up-to-date guide to pacemaker technology and its clinical implementation As the field of cardiology continues to advance and expand, so too does the technology and expertise behind today's electrophysiological devices. **Cardiac Pacing, Defibrillation and Resynchronization** has been assembled by international specialists to give all those caring for patients with heart disorders a clear and informative guide to the pacemakers and clinical methods of today. Cardiac Pacing: An Illustrated Introduction will provide an introduction to all those who have or who are developing an interest in cardiac pacing. At a time in the UK when pacing is being devolved from specialist tertiary cardiac centres to smaller district general hospitals and in the USA where pacemaker implantation is no longer the responsibility of the surgeon and in the domain of cardiologists, there is a need for a text which offers a guide to pacing issues to be used alongside a comprehensive practical training programme in an experienced pacing centre
