Deutz-Fahr Agrotron 4.70 Specs and data - United Kingdom

The hydraulic system in the Agrolux series uses a gear pump with a maximum capacity of 33 l/min (or 45 l/min on the Agrolux 4.80) which feeds the rear lift and the two-way auxiliary distributors (in standard configuration - alternatively, four-way distributors or, for the Agrolux 4.80, six-way distributors are available as an option). All models in the series may also be equipped with a ...

TractorData.com Deutz-Fahr Agrotron 4.90 tractor information

Deutz can trace its history to the Nikolaus Otto, Gottlieb Daimler, and the first internal combustion engines. Agricultural machinery production began in 1907. Deutz tractors were very popular in western Europe after World War II. Farmers liked the simple, rugged air-cooled diesel engines. In 1969, Deutz merged with Fahr, a farm implement manufacturer and the Deutz-Fahr brand was born. The ...

Energies is open to submissions for a Special Issue on “Renewable Energy Production from Energy Crops and Agricultural Residues”. Biomass represents an important source of renewable and sustainable energy production. Its increasing consumption is mainly related to the increase in global energy demand and fossil fuel prices, but also to a lower environmental impact compared to non-renewable fuels. These factors take RED II directives into consideration. In the past, forestry interventions were the main supply source of biomass, but in recent decades two others sources have entered the international scene. These are dedicated energy crops and agricultural residues, which are important sources of biomass for biofuel and bioenergy. Below, we consider four main value chains: • Oil crops: Oil production from non-food oilseed crops (such as camelina, Crambe, safflower, castor, cuphea, cardoon, etc.), oil extraction, and oil utilization for fuel production. • Lignocellulosic crops: Biomass production from perennial grasses (miscanthus, giant reed, switchgrass, reed canary grass, etc.), woody crops (willow, poplar, Robinia, eucalyptus, etc.), and agricultural residues (pruning, maize cob, maize stalks, wheat chaff, sugar cane straw, etc.), considering two main transformation systems: 1. Electricity/heat production 2. Second-generation ethanol production • Carbohydrate crops (cereals, sweet sorghum, sugar beets, sugar cane, etc.) for ethanol production. • Fermentable crops (maize, barley, triticale, Sudan grass, sorghum, etc.) and agricultural residues (chaff, maize stalks and cob, fruit and vegetable waste, etc.) for production of biogas and/or biomethane.
