Financial Programming and Policies - IMF

Financial programming is a framework to analyze the current state of the economy, forecast where the economy is headed, and identify economic policies that can change the course of the economy. In Part 1 of the FPP sequence, presented by IMF's Institute for Capacity Development, you will learn the basic skills required to conduct financial programming.

Financial Programming and Policy The Case of Hungary ...

A financial program (also called an adjustment program) is a comprehensive and consistent set of policy measures designed to achieve a given set of macroeconomic objectives. Financial programming is the process of designing these measures, which a country is generally required to develop before receiving financial support from the IMF.

of IMF-supported macroeconomic adjustment programs. This volume, edited by Richard Barth and William Hemphill, includes contributions from staff members of the IMF institute and introduces the reader to the concepts and tools of analysis needed to formulate a financial program. The book presents a series of workshops that explain the accounting identities, behavioral relationships, and forecasting techniques that underlie the construction of a financial program. The workshops use the case of Turkey to illustrate the techniques, and the complete data set for Turkey is included on a diskette (supplied in a back-cover pocket).

This book, by a staff team in the IMF Institute, contains a series of workshops that introduce the process of formulating a hypothetical macroeconomic and structural adjustment program, which is a

central element in the financial programming courses offered by the IMF Institute. In addition to elaborating key concepts for the four major sectoral accounts, the workshops are designed to allow the development of a step by step reference scenario for Sri Lanka.

The case study of Hungary clarifies the specific macroeconomic policy requirements of countries in transition from centrally planned to market economies. the study, edited by Karen A. Swiderski, covers the period through 1990 and provides material needed to develop consistent projections of macroeconomic developments in Hungary.

The workshop consists of a day of lectures, four and a half days working through a financial programming exercise, and a half-day

Final session devoted to presentation of the financial programs that the participants have designed. The lectures will: (1) Provide an overview of the system of macroeconomic accounts in the context of financial programming, with particular emphasis on the interrelations among the accounts. (2) Discuss the practical steps in the formulation of an internally consistent financial program. In the financial programming exercise, participants will work together in small groups, with each group formulating a financial program for the case-study country under the guidance of an experienced counselor. The main elements of this exercise are: (1) Developing a baseline scenario assuming no policy changes. (2) Assessing the adjustment need and setting program objectives. (3) Determining policy instruments required to achieve the objectives. (3) Projecting sector accounts for the program period based on the objectives and

Bookmark File PDF Financial Programming And Policy The Case Of Turkey Reprint

the proposed measures. (4) Assuring coherence and internal consistency of the program objectives and policy measures. In the final session, each group will make a presentation on its analysis and policy proposals for the country case, followed by a general discussion.

This paper presents a simple simulation model that enables the formulation of a consistent growth-oriented, medium-term adjustment program. The applied version is available in Excel (using data for El Salvador) and can be used directly as a financial

Financial programming tool that provides a range of standard IMF performance criteria together with a complete set of consistent accounts for the real, monetary, public, and external sectors of the economy. Medium- and long-term growth considerations are incorporated through a neoclassical production function at the same time as monetary and fiscal policies are adjusted to satisfy the requirements for internal and external balance.
