The first parameter regards sailing speed of the raft when using Engines, which is always valued between 1.5 and 2.5, and can never exceed these numbers. A single Engine will push the raft at a speed of 2, and adding an additional Engine will increase the speed of the raft to 2.5. The second parameter regards overburdening the raft. As mentioned above, a single Engine can move up to 100 Foundations, however there is a 'Slow Zone' between 101-110 Foundations(per engine) where the Raft will ...

For example, an engine might produce its maximum horsepower between 5,200 and 5,500 rpm. The transmission allows the gear ratio between the engine and the drive wheels to change as the car speeds up and slows down. You shift gears so that the engine can stay below the redline and near the rpm band of its best performance (maximum power).
