Saints Alive introduces the stories of the saints, reflects on their
meaning for today and shows that true wisdom is timeless. The first
four books in this series include The Life and Wisdom of Francis of
Assisi, The Life and Wisdom of Margaret of Scotland, The Life and
Wisdom of Catherine of Siena, and The Life and Wisdom of Benedict.

This comprehensive volume follows up and expands on an earlier
National Academy of Sciences book. It is the result of an intensive
multidisciplinary effort to assess the problems relating to petroleum-
derived hydrocarbons in the marine environment. Specifically, it

examines the inputs, analytical methods, fates, and effects of petroleum in the marine environment. The section on effects has been expanded significantly, reflecting the extensive scientific effort put forth in determining the effects of petroleum on marine organisms. Other topics discussed include petroleum contamination in specific geographical areas, the potential hazards of this contamination to human health, the impact of oil-related activities in the northern Gulf of Mexico, and the potential impact of petroleum on fisheries.

The developmental history of the tractors built by the dominant agricultural manufacturer of the early 20th Century, International Harvester, is dramatically told in *The Farmall Dynasty*. The book traces the evolution of the Farmall tractor from the early Titans and Moguls through to modern times. The book includes well-researched accounts of the development of the original Farmall, the Letter Series, 4100, Cub, and other legendary IHC tractors, with first-hand accounts from factory engineers describing the challenges they faced.

Early anthropological evidence for plant use as medicine is 60,000 years old as reported from the Neanderthal grave in Iraq. The importance of plants as medicine is further supported by archeological evidence from Asia and the Middle East. Today, around 1.4 billion people in South Asia alone have no access to modern health care, and rely instead on traditional medicine to alleviate various symptoms. On a global basis, approximately 50 to 80 thousand plant species are used either natively or as pharmaceutical derivatives for life-threatening conditions that include diabetes, hypertension and cancers. As the demand for plant-based medicine rises, there is an unmet need to investigate the quality, safety and efficacy of these herbals by the “ scientific methods ” . Current research on drug discovery from medicinal plants involves a multifaceted approach combining botanical, phytochemical, analytical, and molecular techniques. For instance, high throughput robotic screens have been developed by industry; it is now possible to carry out 50,000 tests per day in the

search for compounds which act on a key enzyme or a subset of receptors. This and other bioassays thus offer hope that one may eventually identify compounds for treating a variety of diseases or conditions. However, drug development from natural products is not without its problems. Frequent challenges encountered include the procurement of raw materials, the selection and implementation of appropriate high-throughput bioassays, and the scaling-up of preparative procedures. Research scientists should therefore arm themselves with the right tools and knowledge in order to harness the vast potentials of plant-based therapeutics. The main objective of *Plant and Human Health* is to serve as a comprehensive guide for this endeavor. Volume 1 highlights how humans from specific areas or cultures use indigenous plants. Despite technological developments, herbal drugs still occupy a preferential place in a majority of the population in the third world and have slowly taken roots as alternative medicine in the West. The integration of modern science with traditional uses of herbal drugs is important for our understanding of this ethnobotanical relationship. Volume 2 deals with the phytochemical and molecular characterization of herbal medicine. Specifically, It will focus on the secondary metabolic compounds which afford protection against diseases. Lastly, Volume 3 focuses on the physiological mechanisms by which the active ingredients of medicinal plants serve to improve human health. Together this three-volume collection intends to bridge the gap for herbalists, traditional and modern medical practitioners, and students and researchers in botany and horticulture.

I have much pleasure in writing a preface to Mr. Takatura Ando's book on Aristotle. Apart from his intrinsic importance, as one of the three or four greatest of all philosophers, Aristotle is important on having given for many centuries the greatest influence in moulding the thought of European countries. The language difficulty has no doubt prevented him from exercising very much influence on Japanese thought, and I welcome very warmly to hear that Mr. Ando is about to have his book

printed in Japan. I hope it will be widely circulated, as it must certainly deserve that. W. D. Ross AUTHOR'S FOREWORD In publishing this book, I cannot prohibit myself of reminding the days and nights when it was written. In that era of worldwide madness, Aristotle's philosophy was the only refuge wherein my depressed mind could come to life. It was written bit by bit under all desperate circumstances throughout the war time. My heart was set on the completion of this work while the fate allowed me to live. It was nearly carried out by the end of the war. Having no hope of survival, I buried my manuscript in the earth, without however any expectation of a better lot for it.

This paper focuses on Guinea's Fourth Review Under the Extended Credit Facility (ECF) Arrangement, and Financing Assurances Review. While performance under the IMF-supported program remains broadly satisfactory, Guinea faces significant downside risks related to coronavirus disease 2019 pandemic. The IMF will remain closely engaged with the Guinean country authorities as the situation evolves, and as the authorities further develop their policy responses and financing needs change. The ECF arrangement supports strengthening Guinea's resilience, scaling-up growth-supporting investment and social-safety nets and promoting private sector development. Achieving the programmed basic fiscal surplus in 2020 will contribute to containing inflation and preserving debt sustainability. Mobilizing additional tax revenues and reducing electricity subsidies will create fiscal space to scale-up growth-supporting public investments and strengthen social safety nets. Implementing programmed tax revenues measures, adopting an automatic petroleum products price adjustment mechanism, and advancing the multi-year electricity tariff reform is key. A prudent borrowing strategy will support scaling-up growth-supporting public investment.
