nutrition; modified consistency and gastrointestinal diets; calorie, protein, fat, and sodium controlled diets; and miscellaneous and test diets. Diets reflect revised recommendations of the American Diabetes and Heart Associations where applicable, and meet RDAs unless otherwise noted. A physician's guide facilitates the ordering of diets for specific diseases. Cooperation between physician and dietitian is encouraged to optimize nutritional care of the patient. A diet as tolerated policy, rather than rigid food restrictions, is recommended. Appendices provide supplementary information on weight-for-height, weights and measures, nutrients, food composition, and sodium, potassium, magnesium, and caffeine content of foods and beverages.
