Digital forensics and multimedia forensics are rapidly growing disciplines whereby electronic information is extracted and interpreted for use in a court of law. These two fields are finding increasing importance in law enforcement and the investigation of cybercrime as the ubiquity of personal computing and the internet becomes ever-more apparent. Digital forensics involves investigating computer systems and digital artefacts in general, while multimedia forensics is a sub-topic of digital forensics focusing on evidence extracted from both normal computer systems and special multimedia devices, such as digital cameras. This book focuses on the interface between digital forensics and multimedia forensics, bringing two closely related fields of forensic expertise together to identify and understand the current state-of-the-art in digital forensic investigation. Both fields are expertly attended to by contributions from researchers and forensic practitioners specializing in diverse topics such as forensic authentication, forensic triage, forensic photogrammetry, biometric forensics, multimedia device identification, and image forgery detection among many others. Key features: Brings digital and multimedia forensics together with contributions from academia, law enforcement, and the digital forensics industry for extensive coverage of all the major aspects of digital forensics of multimedia data and devices Provides comprehensive and authoritative coverage of digital forensics of multimedia data and devices Offers not only explanations of techniques but also real-world and simulated case studies to illustrate how digital and multimedia forensics techniques work Includes a companion website hosting continually updated supplementary materials ranging from extended and updated coverage of standards to best practice guides, test datasets and more case studies

This book documents the UFO sightings seen at O ' Hare Airport, NASA ' s Shuttle Atlantis, Area S4, England, Turkey, Russia, Texas, the lunar surface, and much more. Learn about UFO sightings documented around President Obama, Reagan, Carter and more. There are twenty intense chapters, each on a different sighting, plus three bonus chapters on new UFO related information. Did you know there were recently discovered faces on Mars of not one, but four new alien species? The photos are inside this book. Look at this conversation during the O ' Hare Airport UFO sighting that the United Airlines ramp tower and the FAA Area Supervisor had in a nearby O ' Hare tower. We begin to understand some details of a photograph that exists through their interesting and revealing conversation: Ramp Tower: " I ' m sorry, there was, I told Dave, there was a disc flying outside above Charley 17 and he thought I was pretty much high. But, um, I ' m not high and I ' m not drinking. " O ' Hare Tower: " Yeah. " Ramp Tower: " So, someone got a picture of it. So if you guys see it out there... " O ' Hare Tower: " A disc, like a Frisbee? " Ramp Tower: Like a UFO type thing. " O ' Hare Tower: " Yeah, Okay. " Ramp Tower: " He got a picture of it. " (Laughing) The information in this book clearly identifies and weights the facts and possibilities that exist in new and interesting ways.

Since the mid 1990s, data hiding has been proposed as an enabling technology for securing multimedia communication, and is now used in various applications including broadcast monitoring, movie fingerprinting, steganography, video indexing and retrieval, and image authentication. Data hiding and cryptographic techniques are often combined to complement each other, thus triggering the development of a new research field of multimedia security. Besides, two related disciplines, steganalysis and data forensics, are increasingly attracting researchers and becoming another new research field of multimedia security. This journal, LNCS Transactions on Data Hiding and Multimedia Security, aims to be a forum for all researchers in these emerging fields, publishing both original and archival research results. This special issue contains five selected papers that were presented at the Workshop on Pattern Recognition for IT Security, held in Darmstadt, Germany, in September 2010, in conjunction with the 32nd Annual Symposium of the German Association for Pattern Recognition, DAGM 2010. It demonstrates the broad range of security-related topics that utilize graphical data. The contributions explore the security and reliability of biometric data, the power of machine learning methods to differentiate forged images from originals, the effectiveness of modern watermark embedding schemes and the use of information fusion in steganalysis.
