Forensic Psychological Assessment in Practice: Case Studies presents a set of forensic criminal cases as examples of a scientist-practitioner model for forensic psychological assessment. The cases involve a number of forensic issues, such as criminal responsibility, violence risk assessment, treatment planning, and referral to long term forensic care. Likewise, different types of offenses are covered, for example, sexual offending, arson, homicide, robbery and domestic violence. The authors address a variety of mental disorders including psychosis, posttraumatic stress disorder, psychopathy and other personality disorders. The book will be useful for novice and experienced forensic psychologists and psychiatrists who are looking for case studies that integrate the most recent empirical evidence with psychological test findings.

Ethicists and psychologists have become increasingly interested in the development of virtue in recent years, approaching the topic from the perspectives of virtue ethics and developmental psychology respectively. Such interest in virtue development has spread beyond academia, as teachers and parents have increasingly striven to cultivate virtue as part of education and child-rearing. Looking at these parallel trends in the study and practice of virtue development, the essays in this volume explore such questions as: How can philosophical work on virtue development inform psychological work on it, and vice versa? How should we understand virtue as a dimension of human personality? What is the developmental foundation of virtue? What are the evolutionary aspects of virtue and its development? How is virtue fostered? How is virtue exemplified in behavior and action? How is our conception of virtue influenced by context and by developmental and social experiences? What are the tensions, impediments and prospects for an integrative field of virtue study? Rather than centering on each discipline, the essays in this volume are organized around themes and engage each other in a broader dialogue. The volume begins with an introductory essay from the editors that a wide-angle view of the fuller range of philosophical and empirical issues that have surrounded the notion of virtue in recent years.

Islamic Psychology or ilm an-nafs (science of the soul) is an important introductory textbook drawing on the latest evidence in the sub-disciplines of psychology to provide a balanced and comprehensive view of human nature, behaviour and experience. Its foundation to develop theories about human nature is based upon the writings of the Qur'an, Sunna, Muslim scholars and contemporary research findings. Synthesising contemporary empirical psychology and Islamic psychology, this book is holistic in both nature and process and includes the physical, psychological, social and spiritual dimensions of human behaviour and experience. Through a broad and comprehensive scope, the book addresses three main areas: Context, perspectives and the clinical applications of applied psychology from an Islamic approach. This book is a core text on Islamic psychology for undergraduate and postgraduate students and those undertaking continuing professional development in Islamic psychology, psychotherapy and counselling. Beyond this, it is also a good supporting resource for teachers and lecturers in this field.

Psychology in Action, 12e is a comprehensive introductory Psychology product that fosters active learning and provides a wealth of tools that empower students to master and make connections between the key concepts. Students will leave the classroom with a solid foundation in basic psychology that will serve them in their daily lives no matter what their chosen field of study and career path.

Psychology, the study of mind and behaviour, has developed as a unique discipline in its brief history. Whether as it currently takes place, or how it has been conducted over the past 140 years or so since it became recognized as a separate field of study, there has been constant debate on its identity as a science. Psychology in Historical Context: Theories and Debates examines this debate by tracing the emergence of Psychology from parent disciplines, such as philosophy and physiology, and analyzes key topics such as: the nature of science, itself a much misunderstood human activity often equated with natural science; the nature of the scientific method, and the relationship between data gathering and generalization; the nature of certainty and objectivity, and their relevance to understanding the kind of scientific discipline Psychology is today. This engaging overview, written by renowned author Richard Gross, is an accessible account of the main conceptual themes and historical developments. Covering the core fields of individual differences, cognitive, social, and developmental psychology, as well as evolutionary and biopsychology, it will enable readers to understand how key ideas and theories have had impacts across a range of topics. This is the only concise textbook to give students a thorough grounding in the major conceptual ideas within the field, as well as the key figures whose ideas have helped to shape it.
