This includes interactions between microplastics and microalgae, as fundamental components at the base of aquatic food webs and pivotal organisms in a wide range of ecosystem functions. In this review, we present the current state of knowledge on microalgae-microplastic interactions and summarize the potential effect on their respective fate.

## ~~A critical review of interactions between microplastics ...~~

Wetland. An ecosystem in which water either covers the soil or is present at the surface of the soil for at least part of the year. Bogs. Wetlands that are often dominated by sphagnum moss and typically form in depressions where water collects. Marshes. Shallow wetlands along rivers, often contain cattails and rushes.
