modern communication in America, Daniel Czitrom examines the continuing contradictions between the progressive possibilities that new communications technologies offer and their use as instruments of domination and exploitation.

This book explores the long-term outcomes of severe and ongoing trauma—particularly complex posttraumatic stress disorder (C-PTSD)—from phenomenological and cognitive perspectives. For example, C-PTSD can result in impairments at the body-schema level. In order to survive, trauma victims may conduct their lives at the body-image level, thus producing a mismatch between body schema and body image. In turn, as in the case of somatoparaphrenia and

Since its publication twenty years ago, Brian Massumi's pioneering *Parables for the Virtual* has become an essential text for interdisciplinary scholars across the humanities. Massumi views the body and media such as television, film, and the internet as cultural formations that operate on multiple registers of sensation. Renewing and assessing William James's radical empiricism and Henri Bergson's philosophy of perception through the filter of the postwar

French philosophy of Deleuze, Guattari, and Foucault, Massumi links a cultural logic of variation to questions of movement, affect, and sensation. Replacing the traditional opposition of literal and figural with distinctions between stasis and motion and between actual and virtual, Massumi tackles related theoretical issues by applying them to cultural mediums as diverse as architecture, body art, the digital art of Stelarc, and Ronald Reagan's acting career. The result is an intriguing combination of cultural theory, science, and philosophy that asserts itself in a crystalline and multifaceted argument. This twentieth anniversary edition includes a new preface in which Massumi situates the book in relation to developments since its publication and outlines the evolution of its main concepts. It also includes

two short texts, “ Keywords for Affect ” and “ Missed Conceptions about Affect, ” in which Massumi explicates his approach to affect in ways that emphasize the book's political and philosophical stakes.

This manual contains completely worked-out solutions for all the odd-numbered exercises in the text, covering Chapters 1 11.

sure, scientists sometimes do the philosophical work of interpreting the metaphysics of space, time, and matter. However, it is rare that either theologians or philosophers convincingly claim that they are doing the scientific work of physical scientists and mathematicians. The rigidity of these divisions and differentiations is relatively new. Modern physical science was invented slowly and gradually through interactions of the aims and contents of mathematics, theology, and natural philosophy since the seventeenth century. In essays ranging in focus from seventeenth-century interpretations of heavenly comets to twentieth-century explanations of tracks in bubble chambers, ten historians of science demonstrate metaphysical and theological threads continuing to underpin the

This book provides an introduction to the relationship between economics and ethics, explaining why ethics enters economics, how ethics affects individual economic behaviour and the interactions of individuals, and how ethics is important in evaluating the performance of economies and of economic policies.

Gathered from sources as diverse as Diacritics and Comics Journal, these interviews reveal the broad range of his thought and interests.
