"This title is a Conflict of Laws casebook with contemporary, practical approach"-- Provided by publisher.

The steady growth of internet commerce over the past twenty years has given rise to a host of new legal issues in a broad range of fields. This authoritative Research Handbook comprises chapters by leading scholars which will provide a solid foundation for newcomers to the subject and also offer exciting new insights that will further the understanding of e-commerce experts. Key topics covered include: contracting, payments, intellectual property, extraterritorial enforcement, alternative dispute resolution, social media, consumer protection, network neutrality, online gambling, domain name governance, and privacy.

Demonstrates the basics of HTML while explaining how to design Web sites, format text, add multimedia effects, and create forms, tables, lists, and style sheets.

The fifth edition of Information Technology Law continues to be dedicated to a detailed analysis of and commentary on the latest developments within this burgeoning field of law. It provides an essential read for all those interested in the interface between law and technology and the effect of new technological developments on the law. The contents have been restructured and the reordering of the chapters provides a coherent flow to the subject matter. Criminal law issues are now dealt with in two separate chapters to enable a more focused approach to content crime. The new edition contains both a significant amount of incremental change as well as substantial new material and, where possible, case studies have been used to illustrate significant issues. In particular, new additions include: • Social media and the criminal law; • The impact of the decision in Google Spain and the 'right to be forgotten'; • The Schrems case and the demise of the Safe Harbour agreement; • The judicial reassessment of the proportionality of ICT surveillance powers within the UK and EU post the Madrid bombings; • The expansion of the ICANN gTLDs and the redesigned domain name registration and dispute resolution processes.

In this book Konstantinos Komaitis identifies a tripartite problem – intellectual, institutional and ethical – inherent in the domain name regulation culture. Using the theory of property, Komaitis discusses domain names as sui generis 'e-property' rights and analyses the experience of the past ten years, through the Uniform Domain Name Dispute Resolution Policy (UDRP) and the Anticybersquatting Consumer Protection Act (ACPA). The institutional deficit he identifies, generates a further discussion on the ethical dimensions in the regulation of domain names and prompts Komaitis to suggest the creation of an environment based on justice. The relationship between trademarks and domain names has always been contentious and the existing institutions of the UDRP and ACPA have not assisted in alleviating the tension between the two identifiers. Over the past ten years, the trademark community has been systematic in encouraging and promoting a culture that indiscriminately considers domain names as secondclass citizens, suggesting that trademark rights should have priority over the registration in the domain name space. Komaitis disputes this assertion and brings to light the injustices and the trademark-oriented nature of the UDRP and ACPA. He queries what the appropriate legal source to protect registrants when not seeking to promote trademark interests is. He also delineates a legal hypothesis on their nature as well as the steps of their institutionalisation process that we

need to reverse, seeking to create a just framework for the regulation of domain names. Finally he explores how the current policies contribute to the philosophy of domain names as second-class citizens. With these questions in mind, Komaitis suggests some recommendations concerning the reconfiguration of the regulation of domain names.
